Value Stream Mapping for Cost Reduction

Location:

Volcano Grille
47 Mendon Rd.
Pawucket, RI 02861

Date:

Tuesday,
March 18,
2008

Schedule:

5:15 p.m. – Cocktails
6:15 p.m. – Dinner
7:00 p.m. – Presentation

Join the New England District of the Precision Metalforming Association for an interesting and informative presentation on value stream mapping for cost reduction, facilitated by Thomas A. Gray, president of Productivity Improvement Network, Inc (PIN Inc.) PIN was founded in 2002 and has been offering training and consulting solutions in the areas of lean, quality systems management and operations management to a diverse client base around the United States

This presentation will cover:

- How value & waste (including the seven types of waste) affect production
- The Value Stream Mapping Approach, including choosing a value stream, mapping the current state, mapping the future state, and creating the value stream plan
- What a value stream map looks like
- How a value stream map is used by the management team in an organization
- How to quantify savings in a value stream map. (Example: inventory savings, direct labor savings, etc.)

Interactive exercises and handouts will be used to illustrate important points. Participants will learn how the Lean Tool of Value Stream Mapping can be used within their organizations for quantifiable reduction in cost.

Mr. Gray has extensive experience in quality and operations management, having worked 15 years supporting the automotive, aerospace, and health care industries. He assisted numerous organizations gain compliance and/or certification to various quality management systems. He has developed and implemented successful lean manufacturing programs for manufacturing and service organizations. In 2002 he founded the Productivity Improvement Network, Inc.
